

Exercise 1

1. Create a new empty web site.
2. Create a master page and add the necessary components:
 - Title– „Electronic bookshop“
Create pages - "Home", "Books", "Contact Us", "Site Map" and organize a menu.
(Web.sitemap, menu, siteMapPath ...) You have to relate all content pages to the master page.
3. Create 2 roles - User and Admin. Create two users related to each role.

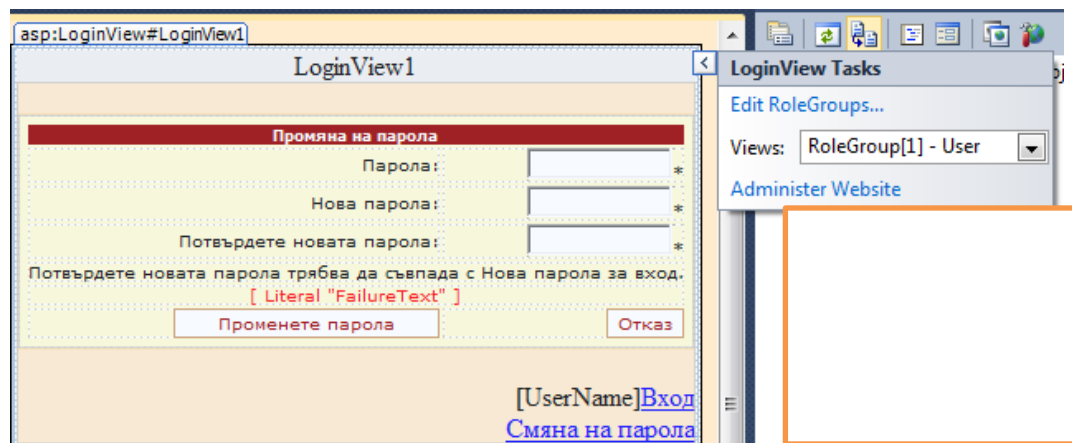

Website-> ASP.NET Configuration->Security

4. Create a login form with a LoginView control.
5. In view of the anonymous template in the LoginView put a Login control, PasswordRecovery (Visible >false) and a LinkButton – „Forgot password“. In the LoginView control also add 2 roles - User и Admin.

- In view of the *User template* in the LoginView put the following controls - LoginName, LoginStatus, ChangePassword (Visible >false) and a LinkButton- „Change password“ .

- In view of the *User template* in the LoginView put the following controls - LoginName, LoginStatus, ChangePassword (Visible >false), LinkButton- „Change password“ , LinkButton „Create user“ and CreateUserWizard.

asp:LoginView#LoginView1

LoginView1 Tasks

Edit RoleGroups...

Views: RoleGroup[0] - Admin

Administer Website

EnableTheming	True
EnableViewState	True
RoleGroups	(Collec
SkinID	
ViewStateMode	Inherit
Visible	True

6. Link buttons become visible when the user clicks respectively PasswordRecovery and ChangePassword. And when cancelled they hide again

```
PasswordRecovery chpass = (PasswordRecovery)LoginView1.FindControl("PasswordRecovery1");
chpass.Visible = true/false;
```

```
ChangePassword chpass=(ChangePassword)LoginView1.FindControl("ChangePassword1");
chpass.Visible = true/false;
```
